

Abstract of the Disclosure

Nucleoside 5'-phosphate ester is produced by
culturing a bacterium belonging to the genus *Escherichia*
5 having an ability to produce nucleoside 5'-phosphate
ester, in which *ushA* gene and *aphA* gene do not function
normally, in a medium to produce and accumulate
nucleoside 5'-phosphate ester in the medium, and
10 collecting the nucleoside 5'-phosphate ester from the
medium.
